

**KEY POINTS:** Regardless of vaccination status, any person with COVID-19 **symptoms** should be tested (if possible). If testing is not done or if the test is **positive**, the person should **isolate** at home and follow other recommendations. Children who are up to date on their COVID-19 vaccines or who have recovered from COVID-19 in the past 90 days **do not need** to quarantine (stay home) after close contact exposure.

\* **Up to date with vaccines** means a person has received all recommended COVID-19 vaccines, including boosters when eligible. VDH recommends that everyone remain up to date on COVID-19 vaccination. VDH generally recommends quarantine for anyone who is not up to date if they come into close contact with a person who is infectious with COVID-19. However, to minimize disruption to in-person learning, students ages 12-17 years who completed their COVID-19 primary vaccine series but have not yet received a booster can forgo quarantine at this time.

† **Isolate** means stay at home and away from others for at least 5 days after symptoms start (or positive test if no symptoms). Wear a mask when around others for a full 10 days. Day 0 is the date of symptom onset or positive test (if no symptoms).

§ **Quarantine** means stay at home and away from others for at least 5 days after exposure to someone with COVID-19. Even if quarantine is not required, testing is recommended on Day 5, if possible, except for those who recovered from COVID-19 in the past 90 days; they should also wear masks around others for a full 10 days. Day 0 is the date of last exposure.

### **SUMMARY OF RECENT CHANGES**

4/14/22: Design was updated but no changes were made to the content.

2/1/22: Updated title of document to include child care facilities in alignment with CDC's updated isolation and quarantine guidance for child care facilities. Added links to the CDC mask page for additional information on masking ages (2 and up).
